

IN THE SPECIFICATION:

Please replace the first full paragraph on page 1, lines 5-10, with the following amended paragraph:

a1  
-- The present invention is directed at a PDA enabled telephone which eliminates the necessity of a PC and allows the PDA user to control operation of a telephone system directly from the PDA. Thus, any PDA enabled set can be controlled by a PDA and the user is not required to be at a specific location before using the PDA to dial a telephone number. The PDA controls the telephone system via telephony applications stored within. Moreover, these applications may be downloaded to the PDA for use with the PDA enabled telephone set. --

IN THE CLAIMS:

Please amend claim 1 as follows:

1. (Amended) A personal digital assistant (PDA) enabled telephony system comprising:

call control means for implementing telephony functions;

a2  
a telephone set connected to said call control means and having a communication port; and

a PDA having a user interface for displaying telephony functions to a user, a detector for detecting a selected telephony function, a telephony application for determining a call command based on said selected telephony function, and a communicator for communicating said call command to said communication port;
